Idea-to-Income
Fieldguide

A practical guide to choosing one useful problem, checking demand, shaping a small offer, and testing a launch.

01	02	03
Choose a real problem	**Talk to potential users**	**Test a small launch**

A clear starting point for first-time creators. No sales or income promises.

START HERE / A PRACTICAL FIRST STEP

Make one useful thing. Learn from what happens.

You do not need a large following or a perfect idea to begin. Start with a specific person, a recurring task, and a small outcome you can help them reach. Publishing is a test; it is not proof of demand.

What this guide helps you create

- A focused idea brief and anonymised customer-research notes.
- A small resource outline and an honest product listing.
- A useful launch experiment with a way to measure visits and purchases.

Use the guide in order

1. Learn before building

Talk with people who match your audience. Ask about what they do now and what they have already tried.

2. Draft, then check

Use the prompts to organise your own knowledge. Verify facts, test instructions, and replace every placeholder.

3. Publish and observe

Show a real example. Track relevant visits and paid purchases over the same dates.

A free download can show interest in a free resource. It does not prove that people will pay. This guide is useful on its own; the optional Launchpad Studio workspace is a separate $19 purchase.

CONTENTS

01 Choose a narrow problem · 02 Check demand · 03 Draft with AI
04 Package and publish · 05 Show useful work on Threads · 06 Run a launch experiment

01 / CHOOSE

Choose one narrow problem

Name a specific person, a recurring task, and a concrete output. Avoid broad claims such as becoming wealthy, getting hired, or going viral.

Worked example / Tutor worksheet kit

Audience

Independent English tutors preparing beginner lessons.

Recurring task

Formatting weekly practice worksheets takes time.

Small first resource

One editable worksheet with a completed example and short instructions.

This is an illustration, not validated demand. Check teaching accuracy, age suitability, and rights to any included material.

Write your idea brief

My audience is: _____

They struggle with this recurring task: _____

Their current workaround is: _____

My resource helps them produce: _____

My experience or evidence is: _____

What I still need to learn: _____

Keep free and paid offers distinct

A free resource should solve one small task completely. A paid resource can add more use cases, editable assets, examples, or guidance. Describe exactly what each includes; do not promise a faster route to income.

02 / RESEARCH

Check demand before building

Talk with five people who match your audience. Ask about things they have actually done before you present your solution. Ask permission before taking notes, and remove identifying details from public examples.

Five useful questions

- When did this problem last happen? Walk me through it.
- How do you solve it now, and what is frustrating about that?
- How much time or money does the current process take?
- What have you tried or paid for already?
- Would you test this specific draft? What would make it worth buying?

What counts as evidence?

Look for behaviour

Repeated specific problems, observed prototype use, and real purchase commitments are stronger evidence than likes or compliments. Five conversations are a learning exercise, not statistical proof.

Conversation notes / anonymise the person

Person or role: _____

Last occurrence and workaround: _____

The problem in their words: _____

Prototype feedback: _____

Test or purchase commitment: _____

Decide what to do next

If the same problem appears repeatedly, build a small testable version. If people cannot describe the problem or already solve it easily, narrow or change the idea.

03 / DRAFT

Use AI, then verify

Paste these prompts into Gemini or another AI tool. Fill in the brackets first. Never include private customer details without permission. AI can help organise your thinking; it cannot validate demand for you.

Prompt 1 / Turn research into a scope

COPY AND CUSTOMISE

My audience is [audience]. Their recurring problem is [problem]. My research notes are [anonymised notes]. Suggest a small resource with a concrete outcome, deliverables, and exclusions. Separate evidence from assumptions. Ask about missing information; do not invent demand.

Prompt 2 / Create a useful outline

COPY AND CUSTOMISE

Outline [resource title] for [audience]. Help them complete [task]. Include clear steps, one completed hypothetical example, a blank worksheet, and a way to check the result. Use only these source facts: [facts]. Flag anything needing verification.

Prompt 3 / Draft and review one section

COPY AND CUSTOMISE

Draft [section] using my notes: [notes]. Use plain English, concrete examples, and short steps. Do not invent stories, quotes, or results. Flag unsupported claims and unclear instructions. Keep placeholders visible for missing facts.

Before you use the draft

- Check facts, calculations, permissions, and source links.
- Complete the instructions yourself; ask a target user to try them.
- Replace generic advice with examples based on your own knowledge.

04 / PACKAGE

Build a complete, honest offer

In the tutor example, the free resource contains the actual editable worksheet, a completed version, and short instructions. The paid kit includes every asset listed on its sales page. An outline alone is not a finished product.

Listing template

TITLE Specific resource and outcome

FOR Specific audience

HELPS WITH Concrete task

YOU RECEIVE Exact files, examples, and instructions

PREVIEW Screenshot or demonstration

ACCESS Formats and how to open them

LIMITS What users still need to do

PRICE / SUPPORT Accurate terms and support route

Publishing checklist

- Check your checkout provider’s eligibility, payout options, current fees, and terms.
- Set the price and explain exactly what the buyer receives.
- Preview the listing and test the access experience.
- Link the optional paid product from the free resource only when it is useful and ready.

Be specific about the next step

The free resource should stand on its own. Explain how an optional paid product adds further templates, examples, or workspace features. Avoid a purchase gate that withholds the promised outcome.

05 / SHARE

Show useful work on Threads

Give people a reason to follow: a specific audience, a recurring topic, and visible examples of your work. Treat formats and posting times as experiments, not guaranteed distribution tricks.

Three posts to start with

DEMONSTRATION

Show the work

For [audience], here is how [resource] helps with [task]. Input: [example]. Steps: [steps]. Output: [preview]. This is [a real / hypothetical] example.

RESEARCH QUESTION

Invite a useful reply

When you last faced [problem], how did you solve it? What took the most time? I am testing [specific solution] and would like to understand your current process.

HONEST UPDATE

Share measured results

During [date range]: [views] views, [tracked visits] store visits, [free signups] signups, and [paid purchases] purchases. What I learned: [actual lesson]. My next change: [action].

Before you post

- Use your own link and replace every bracketed placeholder.
- Label hypothetical examples clearly; do not present them as personal results.
- Avoid false deadlines, unsupported earnings claims, and repetitive plugs.
- Reply with specific help and questions, not only a link.

06 / MEASURE

Run a launch experiment

A useful product may take longer than a week to research, build, and test. Move at a pace that lets you check the details.

A practical sequence

- Record five conversations and choose one recurring problem.
- Build a small draft and watch three relevant users try it.
- Fix confusing instructions and verify every promised deliverable.
- Publish a clear listing and a short product demonstration.
- Post useful examples and use distinct tracking links.
- Compare posts at 24 and 72 hours; record store visits separately.
- Review paid purchases and successful usage before building more.

Measure the whole journey

Views → relevant visits → signups or purchases → successful use

Compare the same dates and traffic sources. Views are not unique people, reactions can repeat, and two product audiences may overlap. Small samples cannot establish a reliable conversion rate.

Your free first step

Use this complete guide to choose a real problem, gather evidence, and plan a small first version. You can finish every exercise without buying another product.

Optional next step / Launchpad Studio

Launchpad Studio is a separate $19 one-time purchase. It provides an online place to organise research, prompts, offer drafts, posts, and launch tasks. Review its details and decide whether the workspace fits your needs.

This guide offers a process, not a promise of income, sales, followers, or market demand.
